

CHENEGA CITADEL

THE POWER TO PROTECT

CHENEGA CITADEL

PORTS SECURITY MANAGEMENT

Through our in-house expertise, combined with selected specialist partnerships, Chenega International Consulting (CIC) offers comprehensive and forward-thinking technologies and services to enhance your security, HSE and Port Operations. Ranging from intelligence analysis and situational awareness to surveillance and accounting for people, we can integrate SMART Port and Port Operating Systems (POS) with a command and control or common operating platform (COP). This gives unparalleled visibility of the issues for day-to-day management, HSSE and emergency and crisis management.

BENEFITS TO YOUR ORGANISATION INCLUDE:

- Efficient integrated Solutions proportionate to risk
- Security/ISPS Compliance
- Increased stakeholder assurance
- Elevated situational awareness
- Visibility beyond IT to Cyber Security threats
- Improved command, control and response to incidents
- Layered oversight and analytics

HSSE STRATEGY FOR PORTS AND MARITIME

Is your HSSE planning people focused and intelligence led? Are you thinking the unthinkable? As the sophistication of threats increases so does the need to integrate physical and cyber security with wider HSSE planning. CITADEL brings together new and existing elements into a fully integrated solution with all the situational awareness, security and emergency information needed to allow the incident management and response teams to mitigate any given situation.

Information Analysis – Your Threat and Risk Environment

Monitor local and regional threats supported by our highly experienced information and intelligence analysts. Chenega works in partnership with the PFSO Alliance to provide relevant up to date information for professionals globally.

Surveillance – Oversight

Fixed, PTZ, Facial Recognition and UAV cameras, analytics, radar, sonar, fibre optic devices and sensors, including ATEX rated as required. Chenega offers a layered oversight, so technology operators may be monitored by AI and visually to check for potential breaches of protocol and corruption.

Access Control – Situational Awareness – Account for People

Control and be certain about the number and identity of those on site. Our POB partner is a leader in muster management technology; integrate with biometric identity checks to manage emergency evacuations on and off shore. Integrated surveillance cameras and payload capable UAVs.

Cyber Security – Network security

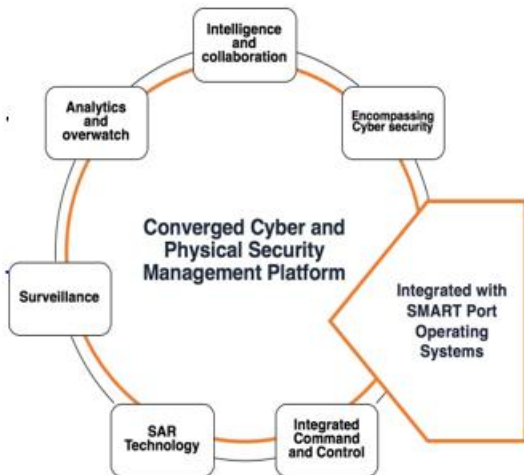

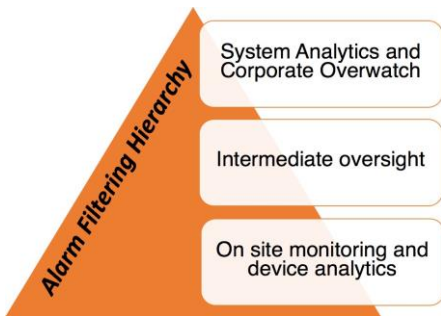

The protection of components and critical systems in SMART Ports, terminals and on vessels from cyber attack is an evolving challenge. Use access control, intelligence and vetting to protect your systems environment. We can help you with all aspects of Cyber Security from threat analysis, solutions and technologies to enterprise level capability, rapid post-attack remediation, enhanced network security.

Converged Security and Information Management (CSIM)

To be effective in a port's complex environment, decision makers demand an accurate real-time picture with all the necessary security data at their fingertips. Integrating multiple feeds including Systems alerts and key SMART Port and POS data into a selected Common Operating Platform (COP) tool we deliver a picture that is optimised for operational, security, cyber and incident responses.

Specialist Training

We offer Maritime and ISPS Security Training delivered to IMO Standards, as well as bespoke training to meet our clients' requirements. We also offer on line Short Courses with Ulster University in Open Source Intelligence (OSINT), Deep & Dark Web and Blockchain. Each course provides 15 transferrable credit points at Level 4 and forms part of Continual Professional Development (CPD).
